TYPE 1A - GENERAL DUTY

TYPE 2A - HEAVIER LOADS

TYPE 1B - SMALLER OPENINGS (STANDARD)

TYPE 2B - HEAVIEST LOADS (CLOSE SPACE)

STAINLESS STEEL SELECTION GUIDE

304 / 304L - 304 Stainless Steel is a versatile general purpose steel with good resistance to atmospheric corrosion, many organic and inorganic chemicals, and to food and beverages. 304L has .03 maximum carbon and is used when extensive welding is called for.

304H - A modification of Type 304, this stainless steel has a controlled carbon content in a range of .04 to .010 for increased strength at temperatures above 800°F. Type 304H can not be hardened by heat treatment but can be hardened through cold working.

316 / 316L - A molybdenum stainless steel containing austenitic stainless intended to provide improved corrosion resistance.

317L - A molybdenum steel containing austenitic stainless which provides improved corrosion resistance over 316 and 316L due to its higher moly content.

904L - Widely used in chemical processing plants. Its combination of chromium, nickel, moly and copper make it resistant to a range of sulfuric acid environments.

L= Low Carbon. Good for welding. .03 max carbon.

H= High Carbon. .04 carbon or higher.

STAINLESS STEEL PLATE - TYPE 304/304L

- Hot Rolled, Annealed and Pickled
- Non-Magnetic (may be slightly magnetic when cold worked)
- ASTM A-167, ASTM A-240, and ASTM SA-240
